Crescent Innovations Inc.

WESTFORD, Mass., April 30, 2024 /PRNewswire-PRWeb/ -- Crescent Innovations Inc. announced today the sale of its Poly-gamma-glutamic Acid (PgGA) technology related to osteoarthritis (OA), plus various intellectual property and know-how assets. Chris Finn, President of the advisory firm **Alternotio** announced today that Crescent Innovations has retained Alternotio to sell the assets using a sealed bid sales process concluding on June 28, 2024 at 12 PM EDT.

PgGA was developed as the next generation of viscosupplements for treat degenerative joint disease. Over 20 million people in the United States suffer from degenerative joint diseases. This results in over 2 million arthroscopic surgeries and about 250,000 knee and hip replacements each year and a healthcare burden of over \$1 billion dollars every year.

"Crescent Innovations has shown, both in vitro and in vivo, that...PgGA...reduce[s] MMPs and other inflammatory marker[s] far greater than HA." Al Prescott, President Crescent Innovations Inc.

✕ Post this

PgGA, while polyanionic like the current state of the art OA treatment, hyaluronic acid (HA), is unique in its charge density. PgGA has triple the charge density of HA. Crescent Innovations has shown, both in vitro and in vivo, that this allows PgGA to reduce MMPs and other inflammatory marker far greater than HA.

PgGA has been tested in disease models and ISO standard bio-compatibility tests.

The assets will be sold at a sealed bid sale on June 28, 2024, at noon. Parties interested in purchasing any or all of the assets must sign a confidentiality agreement, which can be obtained by contacting Chris Finn at info@alternotio.com or calling **+1 (978) 882 - 2586**. Negotiated offers are welcome, but any negotiated sale must be concluded prior to opening bids on the date specified above and must conform to the terms set forth for sealed bids.

About Crescent Innovations Inc.

Crescent Innovations Inc. is a firm focused on the development of biological polymers to create non surgical regenerative solutions for chronic conditions. The firm currently is focused on innovating technology to solve TMJ disorders and singular maladies.
